

RECOVERY CANDIDATE ONLY: does NOT complete normal power, CC decode, cap charger, UVLO latch or rail merger.

U104 enable = request AND USB_ACTIVE AND CONFIG_VERIFIED. S102 ships OPEN/DNP pending qualification.

Required bridge descriptor: bus-powered, 500mA requested; programming/USB qualification NOT performed.

U107/U108 use receiving-domain supplies and Ioff. MCU_3V3 is actual MCU rail, NEVER assumed equal to REC_3V3.

Do not directly join REC_3V3 to buffered MCU power: reverse-blocking merger and BOOT/RESET sequencing remain open.

No RF/DMX/15F charging from this recovery branch. USB ESD, connector/CC and suspend maximum budget remain open.
